Water Management Systems**

Ureco, Uretech & Ureflush

Bespoke washroom solutions, reducing
water usage by up to 96%

What is Ureco?

The Ureco is an eco-friendly innovation that helps prevent costly urinal blockages and foul odours. The Ureco also substantially reduces the amount of water used to run the facilities. As urine passes through and around the Ureco "bio-cap" a small amount of bio is eroded into the solution. This activates the enzyme which breaks down the uric salts and limescale. This results in the formation of a completely harmless and eco-friendly bacterium which eliminates the need for strong chemicals and cleaning agents. The Ureco also emits an effective odour-cancelling fragrance which reduces the need for harmful aerosols and air fresheners.

What it does:

- Saves establishment water and money
- Helps prevent- urinal blockages
- Substantially reduces foul odours
- Helps to protect the environment
- Improves the overall washroom experience

What is Uretech?

The Uretech was developed to give the ultimate level of control to an establishment over their washroom water consumption. Boasting numerous exclusive innovations, the Uretech unit saves time and money by providing detailed analysis of onsite water usage. The Uretech contains an internal real-time clock which facilitates the programming of flush times, specifically to the sites' requirements. This scheduling of flush times provides optimal financial savings without having to compromise on washroom hygiene within the site.

What it does:

- Saves establishment water and money
- Real-time clock allows for flexible programming
- Remote location flush facility
- Hand held control unit for easy servicing
- PIR option available

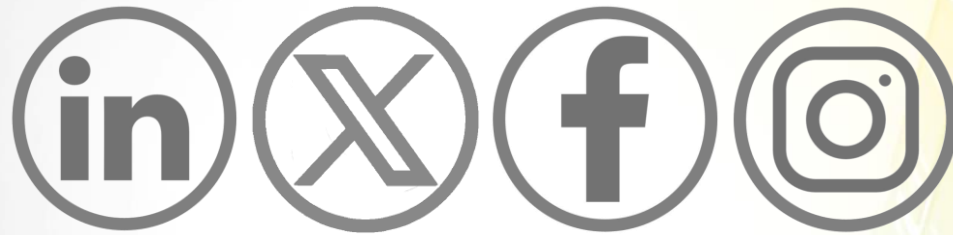

What is Ureflush?

The Ureflush is a retrofit variable flush mechanism developed to save water and reduce water bills. Converting a toilet from a single flush to a variable flush with the Ureflush water saver helps control the amount of water used per flush. Many 9 litre cisterns can use 11 litres of water per flush as an additional 2 litres of water flow from the ball valve during flushing. The Ureflush allows the user to easily reduce this 11 litre flush to just 1 litre by pressing the green Ureflush button.

What it does:

- Saves establishment money
- Saves water (up to 10 litres per flush)
- Helps to protect the environment
- Retro-fit product means easy installation
- Reduces establishment carbon footprint
- More efficient than dual flush toilets
- WRAS approved product
